

Q.3. Write a algorithm and draw the flowchart, to calculate the profit gained or loss occurred considering a Cost price and Selling price.

Algorithm to Calculate Profit or Loss

1. Start

2. Input: Read the cost price (CP).

3. Input: Read the selling price (SP).

4. Process: Calculate the difference between the selling price and the cost price: $\text{Difference} = \text{SP} - \text{CP}$.

5. Decision:

- If $\text{Difference} > 0$:
 - Output: "Profit" and the value of Difference.
- If $\text{Difference} < 0$:
 - Output: "Loss" and the absolute value of Difference.
- If $\text{Difference} == 0$:
 - Output: "No Profit, No Loss".

6. End

Flowchart:-
