

Q.3. Write a algorithm and draw a flowchart to print the table of 5.

Algorithm to Print the Table of 5

1. Start

2. Initialize: Set a variable number to 5. This is the number for which the table is to be printed.

3. Initialize: Set a variable i to 1. This variable will be used to iterate through the multiples.

4. Loop: Repeat the following steps while i is less than or equal to 10:

- **Process:** Calculate the product of number and i:
 $\text{product} = \text{number} * i$.
- **Output:** Print the result in the format "number * i = product".
- **Increment:** Increase i by 1.

5. End

Flowchart:-
